Movie Industry Analysis for New Studio Strategy

Using historical data to recommend the most Ideal Films that New Generation Movies LTD can venture in.

Project Members:

1. Kevin Kisengu
2. Joy Njeru
3. Rebecca Monchari
4. Alex Njihia
5. Mercy Mwangi

PROJECT OVERVIEW

Stakeholders : The Board, New Generation Movies LTD
Problem/Business Understanding: Identify most ideal Films for Production
Data Extraction & Loading : Load IMDB & Box Office Mojo data by importing relevant libraries
Data Exploration/Methodology : Use SQL queries and pandas to explore
Data Cleaning and Preparation :Clean data in readiness for analysis

Data Merging : Merge the cleaned data for insights

Exploratory Data Analysis (EDA): Use Visuals to explore the findings
Recommendations : Use at least 3 visuals to recommend

Conclusion : Focus on high performing genres & observe quality and benchmark against successful studios

Business Problem

- Identify most ideal Films for Production

1. Data Overview and understanding

- Combine data from both IMDB & Office Mojo Data datasets

This Photo by Unknown Author is licensed under CC BY-SA

2. Data Extraction & Loading

- **Libraries used**:
- Pandas
- SQL
- Maltplotlib
- Seaborn

3. Data Exploration

- We explore the structure of the IMDB database and extract relevant tables using SQL queries

```
ics',), ('directors',), ('known_for',), ('movie_akas',), ('movie_ratings',), ('persons',), ('principals',),

g all records from the movie_akas Table using SQL :

te("SELECT * FROM movie_akas");
all()

', 10, 'Джурасик свят', 'BG', 'bg', None, None, 0.0),
', 11, 'Jurashikku warudo', 'JP', None, 'imdbDisplay', None, 0.0),
',
World: O Mundo dos Dinossauros',

ay',

',

os Dinossauros',

le',

', 14, 'Jurassic World', 'FR', None, 'imdbDisplay', None, 0.0),
', 15, 'Jurassic World', 'GR', None, 'imdbDisplay', None, 0.0),
', 16, 'Jurassic World', 'IT', None, 'imdbDisplay', None, 0.0),
', 17, 'Jurski svijet', 'HR', None, 'imdbDisplay', None, 0.0),
', 18, "Olam ha'Yura", 'IL', 'he', 'imdbDisplay', None, 0.0),
```

4. Data Cleaning and Preparation

1. Check for missing values in the datasets
2. Recreate and retrieve datasets
3. Remove rows with missing genre information
4. Fill Missing Values
5. Covert data into format that can be analyzed

```python
df_merged = pd.merge(df, bom, left_on='primary_title', right_on='title', how='inner')
print(df_merged.shape)
df_merged.head()
```

✓ 0.0s

```
(2447, 10)
```

	primary_title	genres	averagerating	numvotes	title	studio	domestic_gross	foreign_g
0	Burn the Stage: The Movie	Documentary,Music	8.8	2067	Burn the Stage: The Movie	Trafalgar	4200000.0	161000

3	Coriolanus	Drama,Thriller,War	6.1	29654	Coriolanus	Wein.	757000.0	3150
4	[illegible]	[illegible]	[illegible]	[illegible]	Interstellar	Par.	188000000.0	[illegible]

5. Data Merging

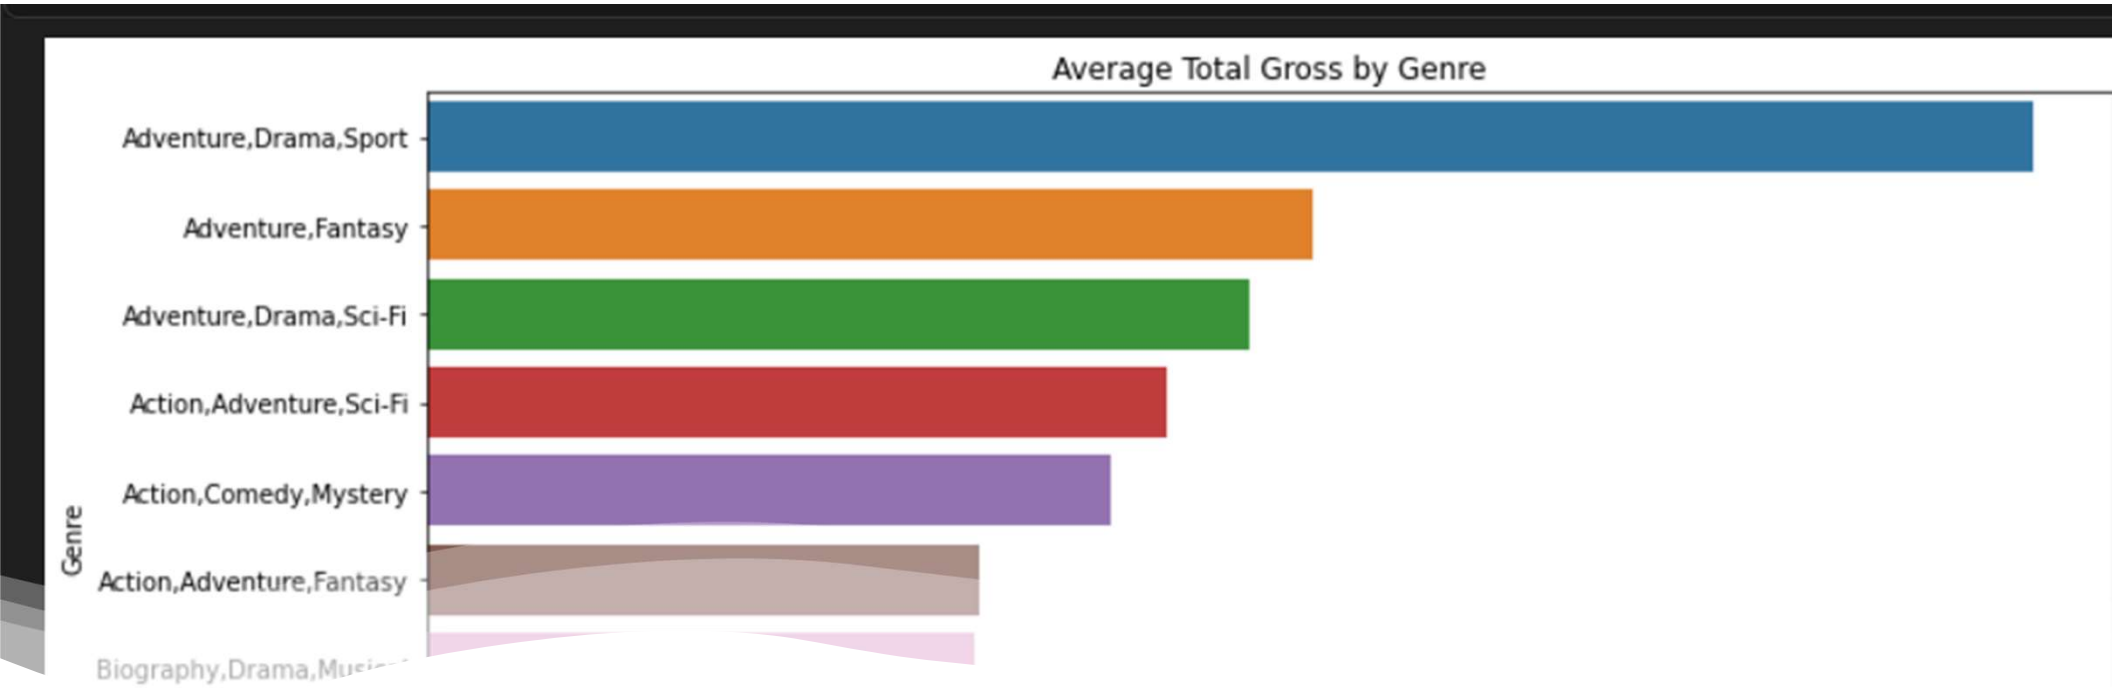
- Merging IMDB and BOM Datasets on Movie Title

6. Explanatory Data Analysis (EDA)

Different movie genres record different revenues with Adventure, Drama & Sport Recording the highest.

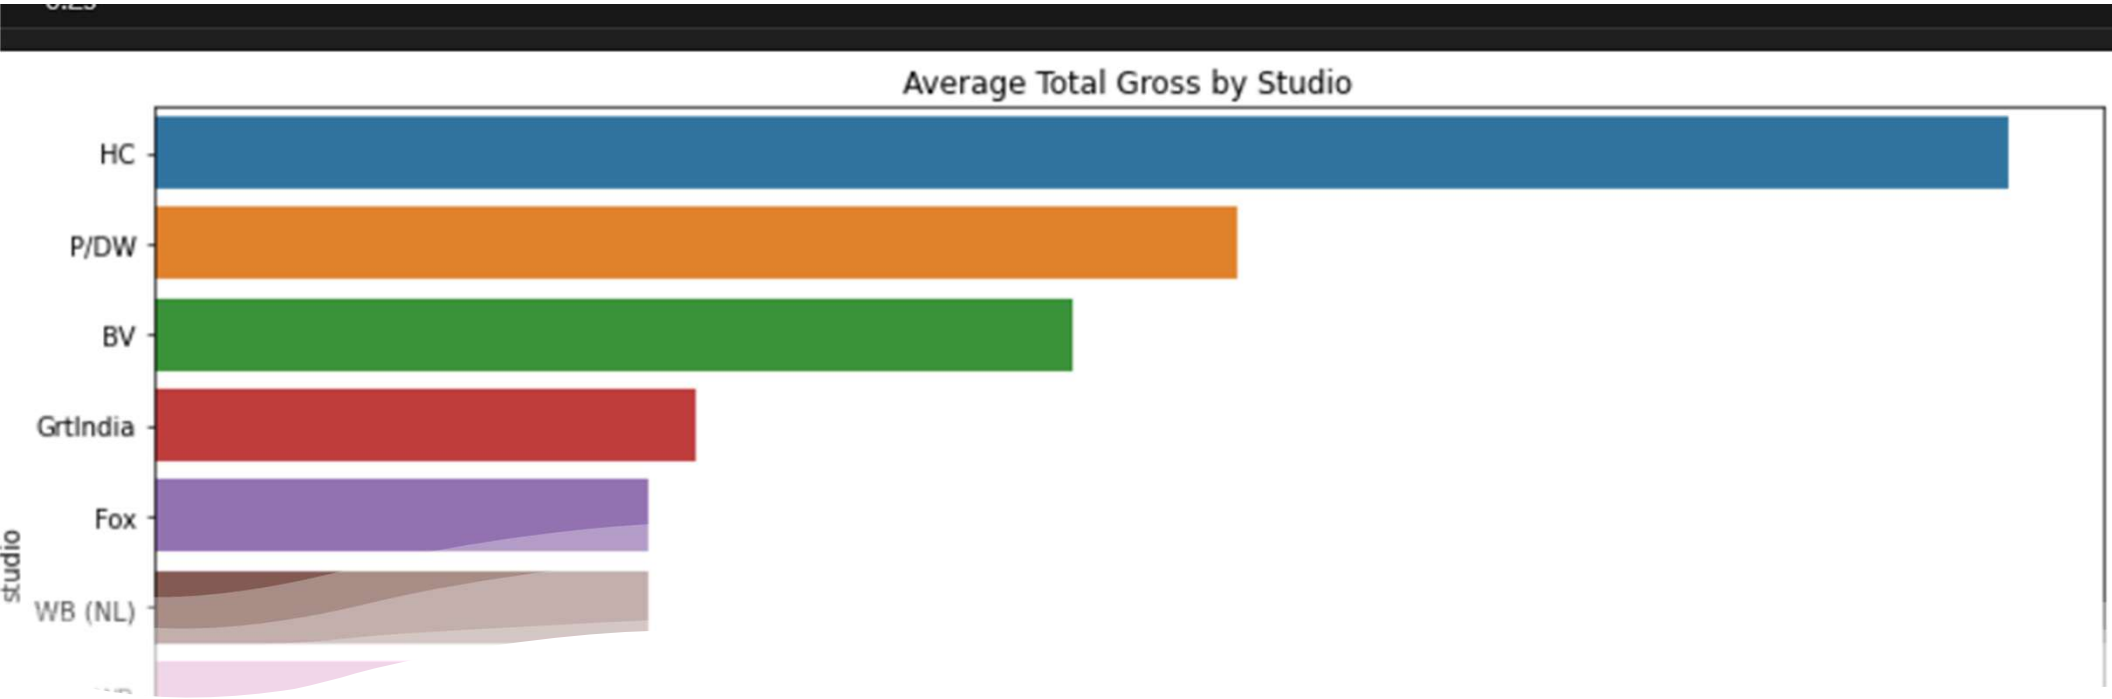
There is a positive but weak relationship between ratings and revenue

A small group of studios consistently achieve much higher average total gross revenue than others



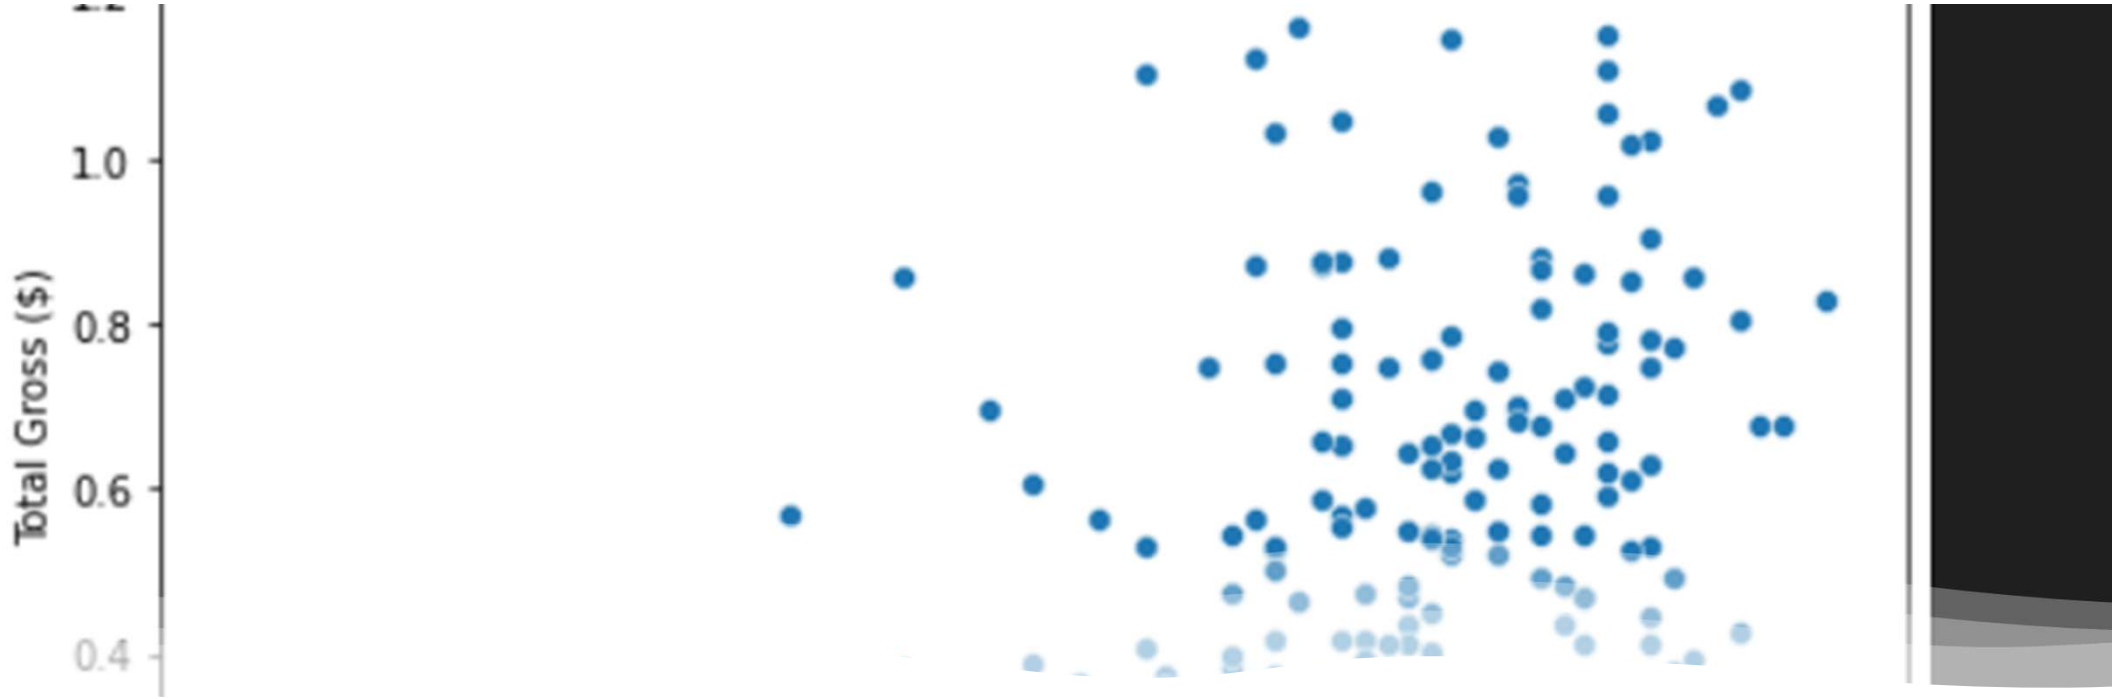
7. Recommendations

- A. Based on Genre, we recommend Adventure, Drama and Sport with Adventure and Fantasy coming far second



Continued

- B. Using the revenue generated, we recommend, HC Studio with P/DW taking far second position for benchmarking.



Continued

- We recommend the studio to invest in improving film quality (storytelling, acting, production value) to increase ratings, while also ensuring strong market appeal to maximize revenue potential

8. Conclusion

- The study analyzed how genre, ratings, and studio performance affect box office revenue
- High-performing genres consistently generate more revenue
- Ratings have a positive but non-linear impact on earnings
- Studio performance varies, with some consistently outperforming others
- Key recommendations: focus on strong genres, improve quality, and benchmark top studios

THE END!
